

Spring Boot Microservices

Beginner to Guru

Monolith Deconstruction Plan

Beer Service

- Will manage 'Beers' - aka products
- Will manage brewing - aka manufacturing
- Will list beers, and validate order lines for valid beers

Beer Order Service

- Manages Beer Orders
- Will manage the lifecycle of an order - from order placement, to order shipment
- Manages customers
- Listens to order events
- Implements call backs (aka Webhooks) to customers

Beer Inventory Service

- Manages Beer Inventory
- Takes in inventory from brewing operations
- Provides inventory for orders
- Implementation will be simple
 - Real use would be more complex
