

A U.S.-based company that is leading the global market by manufacturing world-class flat-rolled aluminum products is looking for a Fullstack Engineer. The engineer will be responsible for conducting user research and user testing to inform the design process. The company runs a network of integrated, technically sophisticated rolling and recycling facilities that manufacture goods used in a variety of industries. This is an amazing opportunity for those who want to create a lasting impact in building new products and features at scale.

**Job Responsibilities:**

- Develop user interface designs and user experience concepts for a variety of applications
- Create prototypes, wireframes, user flows, user journey maps, and other design artifacts
- Monitor user feedback and data to evaluate the success of designs
- Create design systems, interaction models, and style guides

**Job Requirements:**

- Bachelor's/Master's degree in Engineering, Computer Science (or equivalent experience)
- At least 4+ years of relevant experience as a software engineer
- Experience working with UI/ UX design, Angular.js, Java, and Spring Boot
- Familiarity with Python is desirable
- Excellent English communication skills
